ABSTRACT

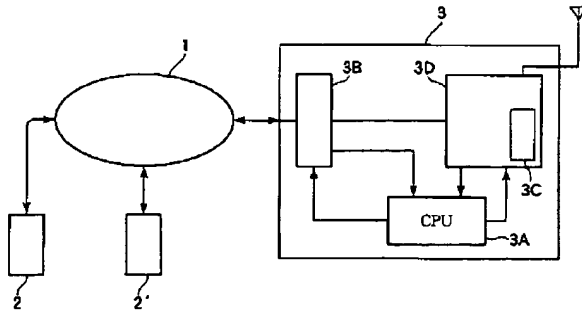

PROBLEM TO BE SOLVED: To provide a television broadcast recording and reproducing distribution system by which a user anywhere can record, reproduce and receive distribution of a desired television broadcast program, without restriction of place.

SOLUTION: Information communication terminals 2, 2', such as mobile phones and a television broadcast recording and reproducing distribution station (server or the like) 3, are connected to a communication network 1, such as the Internet. Upon a video recording (reservation) request from the information

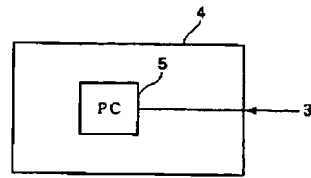

communication terminal 2, the station 3 records a desired television broadcast program by a user. When receiving a reproduction reservation, the station 3 transmits reproduced image data to the terminal 2 via the communication network 1.
